

Alberta Conservation Association
2022/23 Project Summary Report

Project Name: Final Reports

Information, Education, and Communications Program Manager: Don Myhre

Project Leader: Charmaine Brunet

Primary ACA staff on project: Don Myhre, Sue Peters, and Charmaine Brunet

Partnerships

Not applicable

Key Findings

- Produced three Fisheries reports for the Final Report Series:
 - Dowbush, L., G. McKen, and M. Ranger. 2022. Owl River riparian restoration and enhancement project: 2021 monitoring report. Technical Report produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 21 pp + App.
 - Lebedynski, N. 2022. Walleye (*Sander vitreus*) and northern pike (*Esox lucius*) angler surveys on four central Alberta lakes, 2021. Data Report, produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 6 pp + App.
 - Seward, S., and J. Blackburn. 2022. Conservation potential of fish passage barriers for native fish in the Narraway and Muskeg river watersheds. Data Report, produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 6 pp + App.

Abstract

ACA's Fisheries, Wildlife, and Land Management Resource Programs are responsible for generating final project reports for completed projects each year to describe the findings of the work. Interim project reports that capture technical aspects of a significant segment of an ongoing project are also generated for some ACA projects.

The Information, Education, and Communications Program is responsible for coordinating the editing, proofing, formatting, and finalization of these reports; and making sure they are available to the public, and ACA's stakeholders and partners through our website. Three Fisheries reports were completed for 2022/23.

Introduction

Our Fisheries, Wildlife, and Land Management Resource Programs are responsible for generating final project reports for completed projects each year to describe the findings of the work. Interim project reports that capture technical aspects of a significant segment of an ongoing project are also generated for some ACA projects.

The Information, Education, and Communications Program is responsible for coordinating the editing, proofing, formatting, and finalization of these reports; and making sure they are available to the public, and ACA's stakeholders and partners through our website.

Methods

Final reports are edited, proofed, formatted, finalized, and then posted on our website.

Results

Three fisheries reports were produced and posted on our website:

- Dowbush, L., G. McKen, and M. Ranger. 2022. Owl River riparian restoration and enhancement project: 2021 monitoring report. Technical Report produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 21 pp + App.
- Lebedynski, N. 2022. Walleye (*Sander vitreus*) and northern pike (*Esox lucius*) angler surveys on four central Alberta lakes, 2021. Data Report, produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 6 pp + App.
- Seward, S., and J. Blackburn. 2022. Conservation potential of fish passage barriers for native fish in the Narraway and Muskeg river watersheds. Data Report, produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada. 6 pp + App.

Conclusions

Once published, our project reports inform the public and our stakeholders about the results of our wildlife, fish, and habitat studies; recognize the efforts of our staff and the support of our contributing partners; and increase the public's recognition of Alberta Conservation Association (ACA) as a valuable conservation organization in Alberta.

Communications

- Posted reports on our website as they were completed.
- Social media posts linking to the online reports.
