Primary ACA Staff on Project: Amanda Gill, Tara Holmwood, and Sue Peters

Partnerships

Not applicable

Key Findings

- All 68 annual project summaries from the resource programs were posted online.
- Final Alberta Conservation Association Project Reports produced included one Fisheries report.

Details

Alberta Conservation Association's (ACA) Wildlife, Fisheries, and Land Management Resource Programs are responsible for generating final ACA project reports for completed projects each year to describe the findings of the work. Interim project reports that capture technical aspects of a significant segment of an ongoing project are also generated for ACA projects as needed. All projects require an annual project summary report to be produced and posted online.

The Information, Education, and Communications Program is responsible for coordinating the editing, proofing, formatting, and finalization of these reports, and making sure they are available to the public, and ACA's stakeholders and partners through our website. The 68 annual summaries were successfully coordinated, edited, and then posted on our website in April 2024. The completed ACA Project Reports for 2024/25 included one Fisheries report:

- Hurkett, B., and K. Riehl. 2025. Westslope cutthroat trout evaluations in the Trout Creek and Callum Creek sub-watersheds, 2024. ACA Project Report: Final, produced by Alberta Conservation Association, Sherwood Park, Alberta, Canada.
